

## FOR IMMEDIATE RELEASE

### BESSEY PS Series Seaming Tools

If you want to position materials with a smooth surface well then, you require the right tools. This is exactly what BESSEY can offer with its PS130 and PS55 seaming tools. These are specialized tools that help produce a fast and professional result.

#### The PS55 Seaming tool

The PS55 vacuum is initiated by engaging the handle on the suction discs. Turn the ergonomic wooden handle to generate a clamping force of up to 60 lbs (260 N). The guide rods hold the seaming tool on one level for a precise finished result. Height differences which can occur when pulling together the sheets can be easily corrected with the cam levers on the guide rods.

#### The PS130 Seaming Tool

The BESSEY PS130 seaming tool provides craftsmen with a solution for joining materials with smooth surfaces (e.g. granite, Corian<sup>®</sup>, plastic, sheet metal, glass, and even artificial stone). Clamping force of up to 270 lbs (1,200 N) is generated with manually operated vacuum pumps. One position the suction cups (6 in adjustment range) and initiates the pump action. The vacuum can be checked by a marking ring on the pump. If this becomes visible, repeated pumping is required. To bring the surfaces together, turn the ergonomic handle. To release the seaming tool, simply press the release button on the vacuum pumps. The BESSEY all-steel rails keep the suction discs on the level, even under high clamping pressures.

BESSEY<sup>®</sup>. Simply better.
