

## FOR IMMEDIATE RELEASE

### BESSEY GearKlamp (GK Series)

**BESSEY introduces the first of its kind with the GearKlamp. This unique clamp is all made possible by a patent pending mechanism that allows the separation of the spindle from the handle and, where the handle is positioned around the rail.**

The BESSEY GearKlamp offers a more compact solution than the classic bar clamp. Broad movements of the clamping arm are done with a quick-adjust button that allows one to get to the right clamping position quickly and productively. The final clamping action is completed by turning the handle, which is uniquely positioned around the rail. Each turn of the handle transfers the clamping force to the spindle via a geared mechanism incorporated into the sliding bar. This innovative design offers a surprisingly comfortable clamping position and permits applications in places where traditional clamps would not be practical.

The GearKlamp is also a winning choice for durability. It has a stable profiled rail made of tempered, burnished steel. The upper section and the sliding bar's plastic housing protect the drive mechanism from dust and debris and, are made of fiberglass-reinforced polyamide. The unique soft pad can be easily removed to reveal a grooved section to make clamping of oddly shaped objects easier.

The new GearKlamp from BESSEY comes in 4 clamping capacities (6, 12, 18 & 24 In). All have a throat depth of 2 3/8" and an everyday clamping force of 450 lbs. MSRP for the GearKlamp is estimated to be in the range of \$15.97 - \$24.97 USD
